

Top Tips

to Secure your Phone

- 1. Secure the phone with a PIN, and use biometrics** (fingerprint, retina recognition) if they're available

- 2. Only use trusted network connections.** Connect to known public networks. If connecting to an open network, use a VPN for encryption

- 3. Only install trusted apps** from reputable companies

- 4. Always install operating system and app updates** as soon as they become available

- 5. Use strong passwords** for your Google or iCloud accounts. People who gain access to those accounts can gain access to a lot of the data on your mobile device
